

Checklist of information that should be included in new reports of global health estimates

Item #	Checklist item	Reported on page #
Objectives and funding		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	Methods, exposure assessment paragraph 1 and outcome assessments
2	List the funding sources for the work.	Acknowledgements
Data Inputs		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	Exposure and outcome assessments paragraph 1
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	Outcome assessment paragraph 1
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	Methods, exposure assessment paragraph 1 and outcome assessments
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	Methods, exposure assessment paragraph 1 and outcome assessments
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	Methods, exposure assessment paragraph 1 and outcome assessments
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or the name of the institution that retains the right to the data.	Data availability statement
Data analysis		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	Statistical analysis
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	Methods
11	Describe how candidate models were evaluated and how the final model(s) were selected.	Statistical analysis and sensitivity analyses
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	Statistical analysis
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	Statistical analysis
14	State how analytic or statistical source code used to generate estimates can be accessed.	Data availability statement
Results and Discussion		
15	Provide published estimates in a file format from which data can be efficiently extracted.	Supplementary tables
16	Report a quantitative measure of the uncertainty of the estimates (e.g. uncertainty intervals).	Supplementary tables
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	Discussion paragraph 2
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	Discussion and limitations

This checklist should be used in conjunction with the GATHER statement and Explanation and Elaboration document, found on gather-statement.org
